LIVING TRADITION IN A MODERN WAY

The new gallery 3000 series combines traditional values with contemporary technology. So simple, yet so special: the interaction of clear style and harmonious proportions grant this shower enclosure an arresting beauty and striking buoyancy. With its linearity of form, the new gallery 3000 is a harmonious fit for all bathrooms. Discreet yet eye-catching: The perfect solution for all people for whom a shower is an every-day routine but by no means an everyday item.

A CONTINUING SUCCESS STORY

New technology, new highlight features – and all the outstanding quality that you know and love! The new gallery 3000 is the bathroom classic with a contemporary touch, in a perfect balance of practicality and beauty. Cutting-edge technology and innovative features guarantee ease of use and cleaning. Three installation methods and an array of glass typologies make this series outstandingly versatile, and offer you ample leeway for your own customisation requests and individual preferences. **Take a look through the following pages for more information on our new models and find some inspiration for your own gallery 3000!**

PRODUCT RANGE

DESIGN & HIGHLIGHTS

Seen from outside and inside

DESIGN

New, linear, unobtrusive: The harmonious design of the hinges is everything you could ever wish for. The rounded corners enhance the beauty of the shower enclosure as a whole, in seamless flow with the other elements of your shower enclosure.

UV ADHESIVE TECHNOLOGY – BRILLIANT

The hinges are attached directly to the glass by means of the tried-and-tested duka UV adhesive technology. The inner surface of the glass is completely smooth, giving you both clear, uncluttered beauty and outstanding ease of cleaning.

Seen from inside

Seen from outside

180° HINGES

For the first time, the gallery 3000 series features a swing door with 180° hinges. The 90° bi-directional opening ensures easy access to the shower, even in smaller bathrooms.

ADJUSTABLE AUTOMATIC CLOSE SYSTEM

With the tried-and-tested Automatic Close System, the doors glide smoothly along the last few centimetres and draw gently into the closed position.

HORIZONTAL SUPPORT

The horizontal support bars are, likewise, in complete aesthetic harmony with the linear features of the handle and profiles, and play their own part in enhancing the elegance of your shower enclosure. The minimum width of 11 mm guarantees absolute stability with minimum visual impact. The screws of the support bar are countersunk and flush with the surface, while its position allows for maximum flexibility when mounting the showerhead.

Seen from outside, without rubber insert

Seen from outside with rubber insert for doors without a fixed frame component

Seen from inside

HANDLE

The handle is the result of practicality blended with ergonomic performance and design, and has been precision-designed to match the functional and aesthetic features of the door itself; the shape is in perfect harmony with the regular geometric lines of the enclosure. The rubber element within the handle in the inner side of the door ensures top functionality, particularly when in contact with water. For doors without a fixed frame component, the outer side of the handle is fitted with a buffer to protect the door, wall and furnishings in case of contact.

THE 4★ SEAL SYSTEM

The seal system has also been integrated into the new gallery 3000 for even greater ease of cleaning and maintenance. The 4★ seal system is fitted to the base of the glass panelling as a discreet aluminium profile together with a PVC seal insert. The inner deflector and soft flaps of the seal strip keep the water firmly in check. The seal strip can be removed quickly and easily for cleaning or replacement.

MAGNETIC ALUMINIUM PROFILE

A thin, aluminium profile with a magnetic insert is affixed to the vertical edge of the glass. The aluminium profile is calibrated to hold fast to the glass without adhesives, and keeps the magnet firmly in place when the door is in movement or during cleaning. Tolerance can be adjusted at the time of installation.

1 MODEL SERIES, THREE INSTALLATION OPTIONS

WALL PROFILE MODELS

The classic model with vertical wall profiles guarantees optimum flexibility.

The frame profile is fixed to the wall profile with a special “girofix” screw – easy, fast and a great timesaver! All it takes is a 90° turn of the girofix screw to ensure that the frame profile is firmly in place. This allows for adjustment of up to 25 mm on both sides. The girofix technique is then covered with a discreet clip profile, to blend the vertical profile seamlessly with the design of the whole.

FRAMELESS MODELS

The models featuring wall tie bars combine delicate aesthetics with intelligent practicality, absolute stability and stylish elegance.

A socket screw within the panels of this model allows for adjustment during installation within a 5 mm range.

New, smart and innovative. Three different installation methods accentuate the flexibility of the new gallery 3000. Alongside the traditional wall profile model, the range now includes wall-mounted hinge models and the very latest flush-mounted profile.

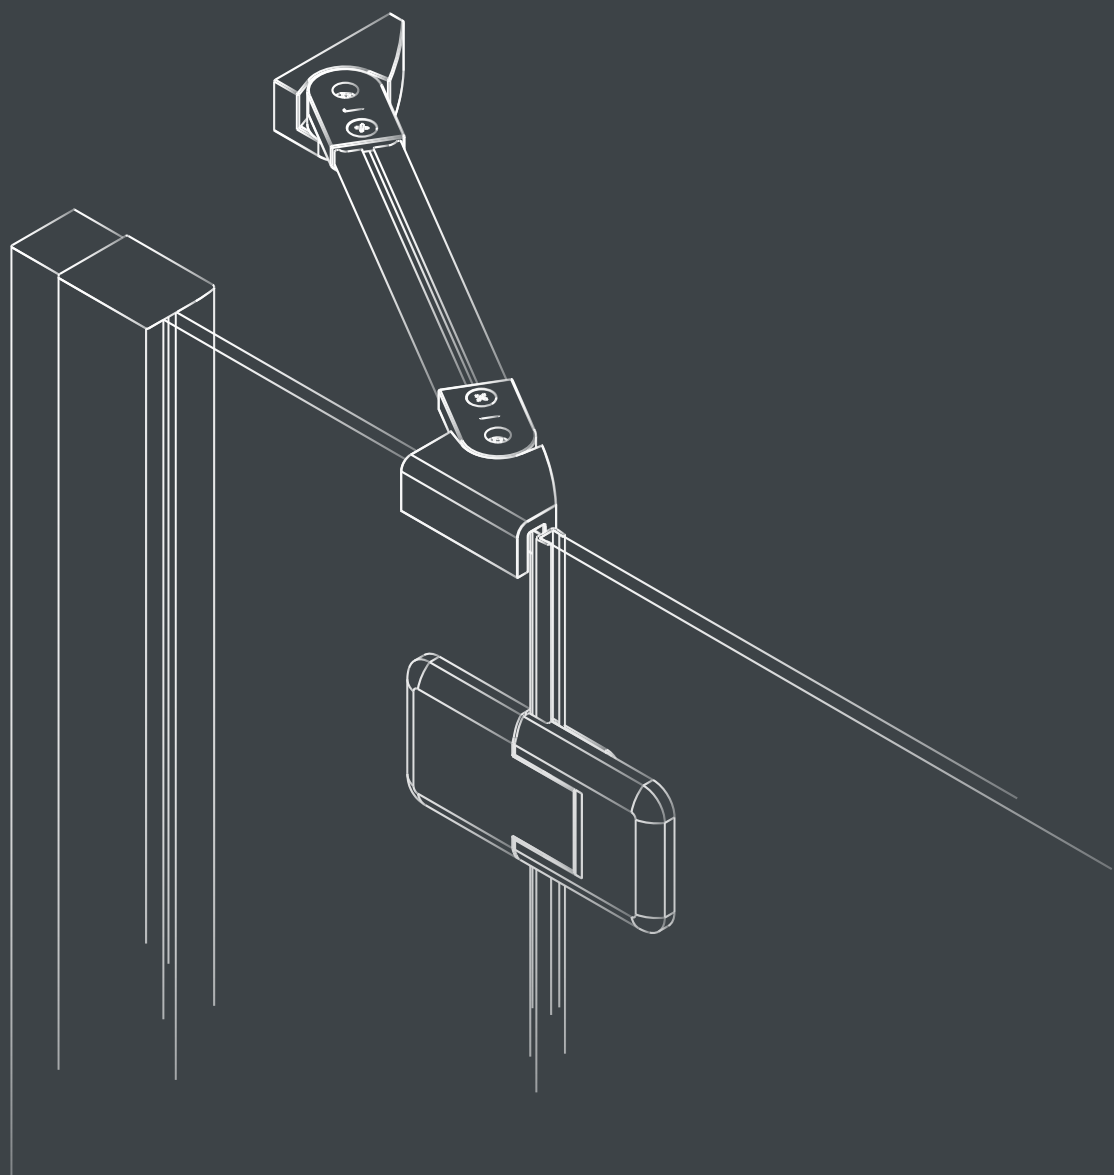

FLUSH-MOUNTED MODELS

The flush-mounted models are the epitome of tailor-made design for people who want a shower enclosure to express a contemporary style. This version also allows for adjustment by means of the proven girofix system within the profile, which is then covered with a snap-on profile. All it takes is a 90° turn of the girofix screw to ensure that the panel is firmly in place. This system allows for adjustment of up to 5 mm.

Flush-mounted model

FLUSH-MOUNTED MODELS

Less is more, and it doesn't get more minimalist than this: The first-ever flush-mounted installation option for the new gallery 3000. The shower enclosure is affixed to the wall by means of a recessed profile: After the glass has been inserted, all you can see is a slim aluminium cover strip, flush with the wall. This model is the ultimate enhancement to the beauty and transparency of the glass, and allows for even greater speed and ease of cleaning. This version also features three colours of aluminium strip and a variety of types of glass provide even more opportunity for customisation.

PROCEDURE FLUSH-MOUNTED MODEL

IMPORTANT

Installation of the flush-mounted model
must be planned before bathroom renovations,
as the profile must be level with the tiled surface.

STEP 1

The flush-mounted model can be ordered in your
desired colours directly from your retailer.

STEP 2

The flush-mounted model must be installed on-site
by a specialist (preferably a tiler), and all sealing
regulations must be observed. The profile cover
must be positioned inside the shower enclosure.

STEP 3

The shower area is tiled.

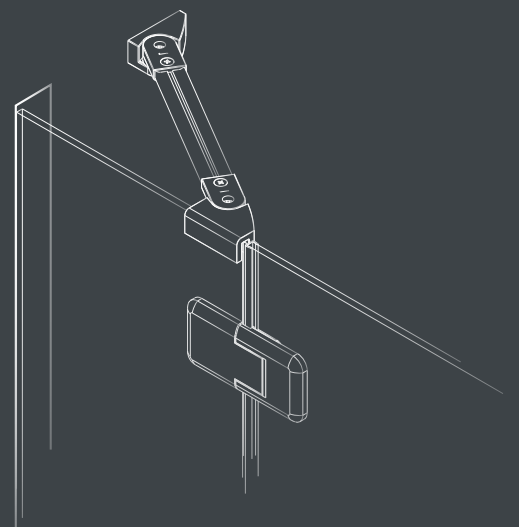

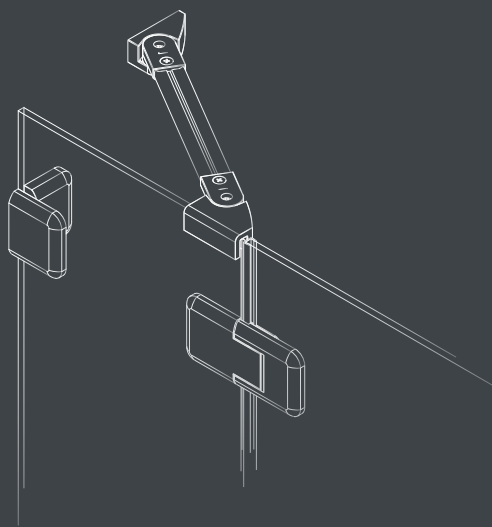

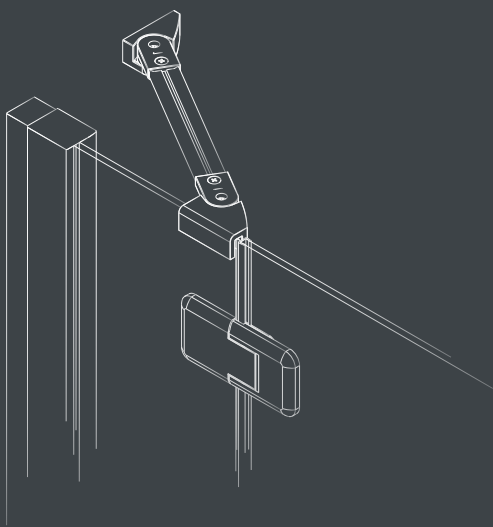

STEP 4

Measurements are taken and
product specifications for the shower
enclosure are defined.

STEP 5

The shower enclosure is installed.
PLEASE NOTE: The recessed profile can only
be combined with a duka shower enclosure!

NEW PRODUCTS, PROVEN TECHNOLOGIES

Quality, functionality, durability and timeless design are characteristics that apply to all duka shower enclosures without exception. This is ensured by high quality and safety standards as well as a seamless chain of control. In addition, duka stands for variety and sophisticated technical solutions, which are symbolized by the duka icons. If you want to know what the duka icons stand for in more detail, you find further information on our website: www.duka.it/ikonen.

Frameless models	•	•		•
Flush-mounted models	•	•	•	•

“Brilliant” adhesive technology

This icon indicates items where the hinges and fasteners are glued to the glass with the new innovative duka – brilliant UV adhesive technique.

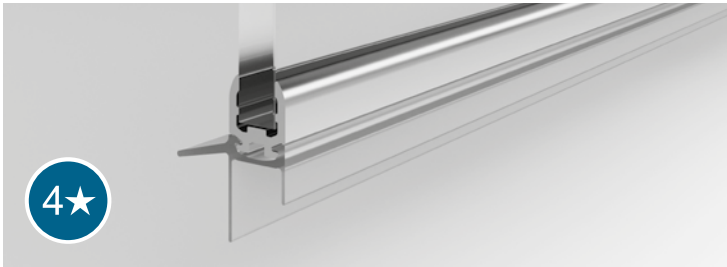

180° hinge with Automatic Close

This icon indicates items with an automatic close system - just a simple touch and the doors glide smoothly through to the closed position.

“girofix” frame profile installation

The models marked with this icon feature a special “girofix-screw” to connect the profile to the wall - quick, easy and convenient!

The 4 ★ seal system

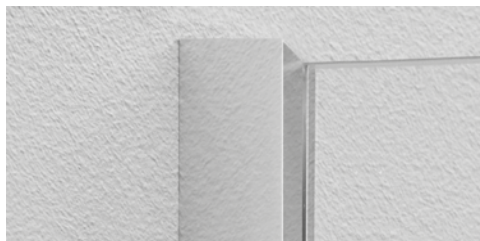

An exceptionally discreet aluminium profile is fitted to the base of the glass together with a PVC seal insert – practically invisible, and outstandingly efficient. The water-repellent inner deflector and soft, downward-angled flaps keep the water firmly in check. The seal strip can be removed extremely quickly and easily for cleaning or replacement!

DUKA WARRANTY

With your duka shower enclosure you will receive a comprehensive guarantee on the product. This is explained in the guarantee document which we enclose in the product packaging. On the rear of this certificate you will find an identification number ("ID"). Your "duka" ID allows us to track the progress of the shower enclosure at the factory at any time - from order to delivery. The guarantee includes a 5 year warranty for the client and a 10-year availability guarantee for spare parts.

By the way: The ID code for your duka shower enclosure is provided in the QR code on the lower outer edge of the glass panel. All information is available on our website at qr.duka.it

TOP-QUALITY MATERIALS

TEMPERED SAFETY GLASS 6 mm

A10 transparent

ST10 satin glass

AG10 Parsol grey

TS10 Privé - satinated silk-screen print in the centre of the glass

VM10 nebula

NEBULA GLASS

The perfect symbiosis of practicality and design: nebula glass. Satinated silkscreen print in the centre of the glass creates a milky optical effect which provides privacy from view without compromising on the bright luminosity of the unit. The smoked effect of the silkscreen gives this model a singularly distinctive character.

TOP-QUALITY MATERIALS

GLASS PROCESSING

duka now offers a new, innovative glass which goes by the name of "ProCare." The treatment takes place during the production of the panels: the surface is magnetron-sputtered with metal oxides in a vacuum. The tempering process activates and fixes the coating, ensuring that water runs full and fast off the glass surface, vastly reducing watermarks and keeping your glass as good as new far into the future. ProCare is available as an alternative to Protect coating for many products.

On request, duka shower enclosures are also available with PROTECT safety glass surface protection which guarantees high standards when it comes to use, clarity, transparency and cleanliness. Important: Do not use any abrasive cleaners or alkaline cleaning material.
